wplocker.com

# 1. Getting Started

To install this theme you must have a working version of WordPress already installed. For information in regard to installing the WordPress platform, please see the WordPress Codex - [http://codex.wordpress.org/Installing WordPress](http://codex.wordpress.org/Installing_WordPress)

## 1.1 Installation

When you are ready to install a theme, you must first upload the theme files and then activate the theme itself. The theme files can be uploaded in two ways:

- **FTP Upload:** Using your FTP program, upload the non-zipped theme folder into the /wpcontent/themes/folder on your server.
- **WordPress Upload:** Navigate to Appearance > Add New Themes > Upload. Go to browse, and select the zipped theme folder. Hit “Install Now” and the theme will be uploaded and installed.

Once the theme is uploaded, you need to activate it. Go to Appearance > Themes and activate your chosen theme.

## 1.2 Configure Settings [Mandatory]

After Theme Setup, you need to configure the below settings. These settings are mandatory.

- **Permalinks:** Navigate to Settings > Permalinks. Under “Common Settings” select “**post name**”. Now click on “Save Changes”.
- **Front Page:** Navigate to Settings > Reading. For “Front Page displays” make sure it is selected to “Your Latest Posts”. Do not set any static page for Front Page displays.

If you haven’t applied these settings above, make sure you do it now and republish your existing posts, pages and portfolio items again.

**Caution:** You may experience **Site Load problems** if you don’t configure the below settings.

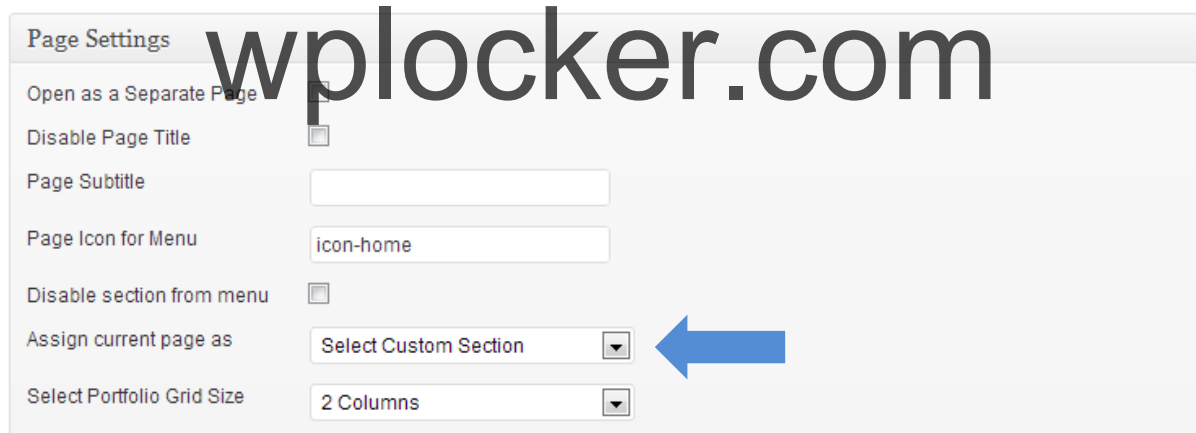

## 1.3 Installing Demo Data

To install demo data content, Navigate to Tools -> Import. You will be given with a list of options. Click on "WordPress", a popup will display if you haven't got importer plugin installed. Then Click "Install Now". You will be redirected to a page, Click on "Choose file". A popup window will be opened, now browse and select the demo xml file provided inside the download folder and click on "Upload File and Import".

The importing will take some time if you've selected to import "Download and Import File attachments". Now, your site is installed with the demo content.

## 1.4 Setting up the Homepage

To set up the homepage you must create a new page, you can do so by navigating to Pages > Add New. You can give this page a title yet you do not have to include any content. Under the "Page Settings" metabox, Select "Assign Current page as" as "Homepage" and click "Publish".

The screenshot shows the 'Page Settings' metabox in WordPress. The settings include: 'Open as a Separate Page' (checkbox), 'Disable Page Title' (checkbox), 'Page Subtitle' (text input), 'Page Icon for Menu' (dropdown set to 'icon-home'), 'Disable section from menu' (checkbox), 'Assign current page as' (dropdown set to 'Select Custom Section'), and 'Select Portfolio Grid Size' (dropdown set to '2 Columns'). A blue arrow points to the 'Assign current page as' dropdown.

Once you have created your new page which uses the "home" page template, navigate to Appearance > Theme Options and configure the "Home Settings". Select the "Home Section Type" option as "Callout Text" or "Slider" and fill out the attributes at the bottom related to the home section type you have selected.

Unlimited slider with drag and drop sortings.

### Home Slider Callout Text

Your homepage is now created and can be viewed by visiting your root URL. You can configure the display of the homepage by visiting the theme options panel.

## 1.5 Adding Slides to the Homepage

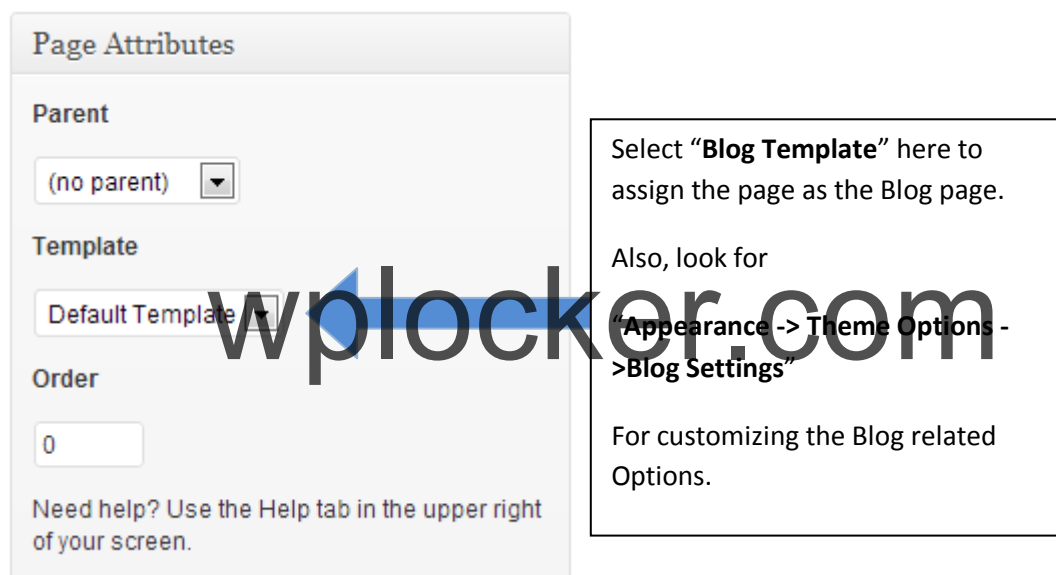

The homepage features a slider into which you can insert your own content. To add a new slide to the slider, navigate to Appearance > Theme Options > Home Settings and

upload an image from your computer. You can choose to set description and a link URL for each slide or leave blank to show the image without a description or link. Repeat this process until you have created all of your slides and click “Save all Changes”.

## 1.6 Setting up the Blog

To set up the blog, you must create a new page, you can do so by navigating to Pages > Add New. You can give this page a title of “blog” yet you do not have to include any content. Click “Publish”.

Once you have created your new page, Select the “Blog Template” template from the Page Attributes section and click “Publish”.

Your blog index is now created and can be viewed by visiting the page you just published.

## 1.7 Setting up the Portfolio

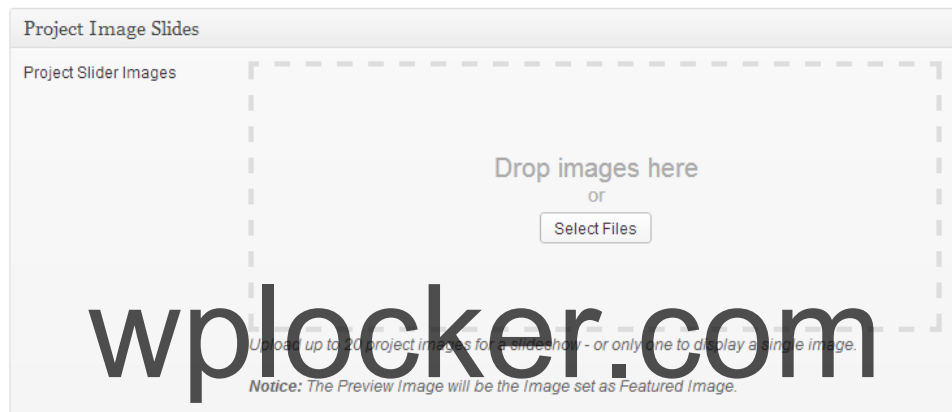

To set up the portfolio section, you must create a new page, you can do so by navigating to Pages > Add New. You can give this page a title of “portfolio” yet you do not have to include any content. Under the "Page Settings" metabox, Select "Assign Current page as" as "Portfolio Section" and click “Publish”. The main portfolio section can now be viewed in the FrontPage.

### 1.7.1 Adding Portfolio Items

To add a new portfolio item, navigate to Portfolio > Add New. Here you can add a brief description of the project, an excerpt, assign various categories and set featured images.

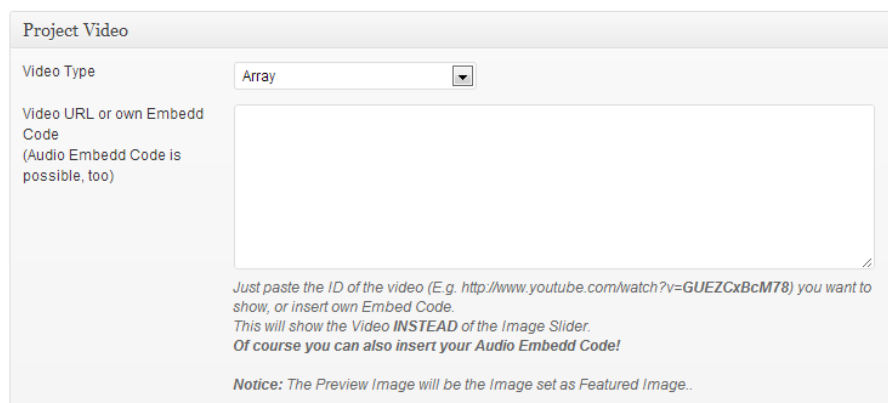

### 1.7.2 Adding Gallery Portfolio

You will need to upload various images to each portfolio item for it to display correctly. Each portfolio item can display a slider. To upload images, look for "Project Image Slides" metabox, click on select files, now browse your computer for the "Images" and upload. You can create a thumbnail for each project which can be uploaded via the featured image.

### 1.7.3 Adding Video

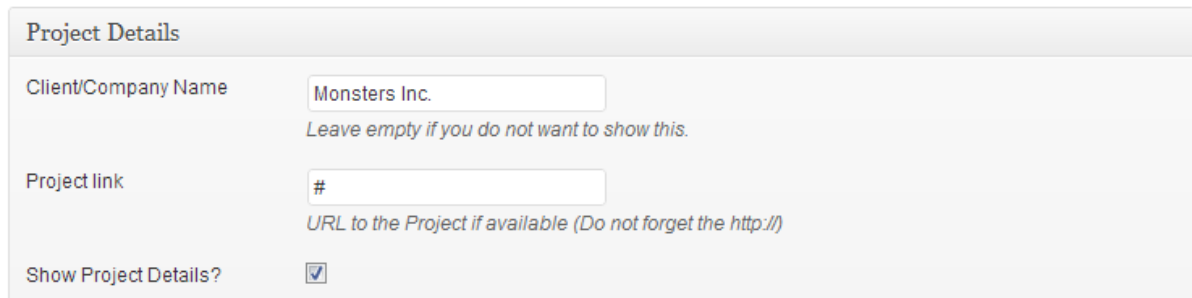

Each portfolio item can display either a self hosted video or video embedded from YouTube or Vimeo. Look for Project Video metabox, to add a video from either Vimeo or YouTube, select video type then, simply copy and paste the ID of the video under "Video URL" textarea box. You do not need to use the embed code or the page URL, just the video ID.

### 1.7.4 Adding Project Meta

To add the client details, project link and other details. Scroll for "Project Details" metabox and fill up the details.

Project Details

Client/Company Name   
*Leave empty if you do not want to show this.*

Project link   
*URL to the Project if available (Do not forget the http://)*

Show Project Details? ☒

**Note:** It is important to note that in order for the filtering functionality to work correctly, you must assign atleast one category to each portfolio item.

## 1.8 Setting up the Contact Section

The Contact section features a contact details, google maps and contact form. To edit the contact info details, navigate to Appearance > Theme Options > Contact Settings and fill up the required fields. You can choose to set telephone, email address, address and a link URL for Google Maps. To show the logo image inside you can upload the image from the "Upload Logo for Map" field. Once you have filled up all the details, click "Save all Changes".

## 2) Theme Features

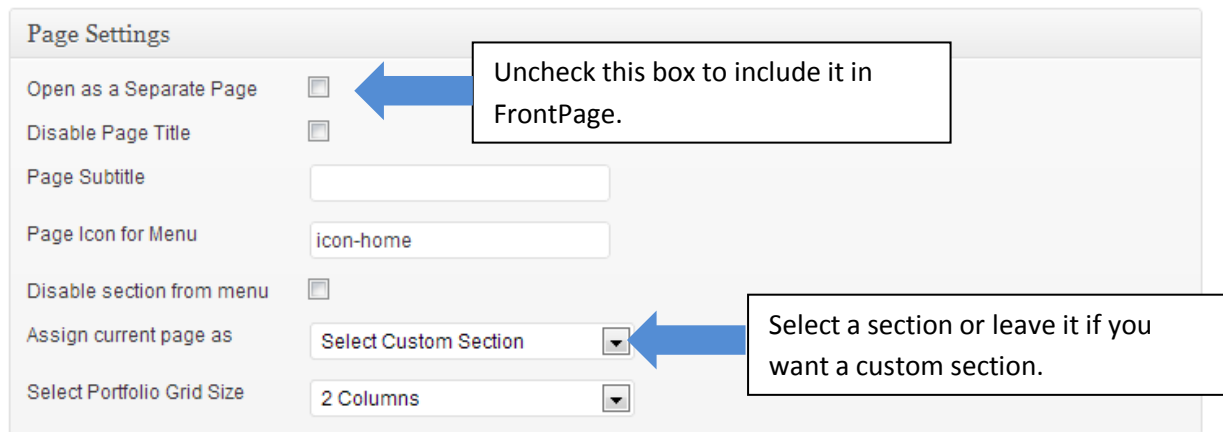

The theme comes packed with features that control the layout and extend the functionality of WordPress. This section will document those features and how to use them successfully.

### 2.1 Adding Custom Sections or Separate Pages

#### 2.1.1 Setting up Custom sections:

To setup your custom sections in the homepage, navigate to Pages > Add New. Next, scroll down and find "Page Settings" metabox and make sure you've unchecked the

"Open as a Separate Page" option. All the pages which are unchecked with this options would automatically get added into the homepage and the menu. If you're willing to avoid it from the menu you can check "Disable section from menu" option. This way you can add a variety of sections.

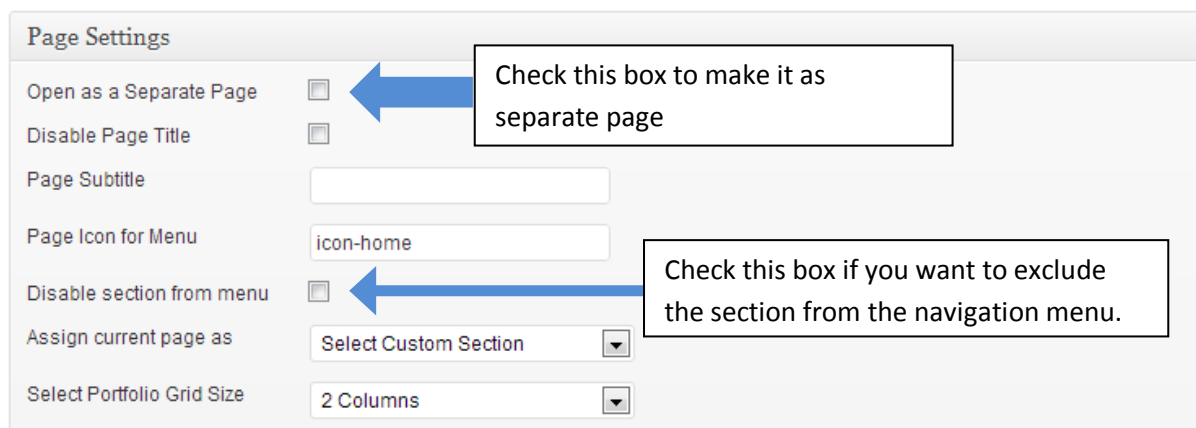

The screenshot shows the 'Page Settings' metabox with the following options and annotations:

- Open as a Separate Page**: ☐ (An arrow points to this checkbox with the text: "Uncheck this box to include it in FrontPage.")
- Disable Page Title**: ☐
- Page Subtitle**:
- Page Icon for Menu**:
- Disable section from menu**: ☐
- Assign current page as**:  (An arrow points to this dropdown with the text: "Select a section or leave it if you want a custom section.")
- Select Portfolio Grid Size**:

### 2.1.2 Setting up Separate pages:

To setup your separate pages, navigate to Pages > Add new. Next, scroll down and find "Page Settings" metabox and make sure you've checked the "Open as a Separate Page" option. All the pages which are unchecked with this option would automatically get added into the FrontPage and the menu. If you're willing to avoid it from the menu you can check "Disable section from menu" option. This way you can create your own pages.

The screenshot shows the 'Page Settings' metabox with the following options and annotations:

- Open as a Separate Page**: ☐ (An arrow points to this checkbox with the text: "Check this box to make it as separate page")
- Disable Page Title**: ☐
- Page Subtitle**:
- Page Icon for Menu**:
- Disable section from menu**: ☐ (An arrow points to this checkbox with the text: "Check this box if you want to exclude the section from the navigation menu.")
- Assign current page as**:
- Select Portfolio Grid Size**:

### 2.1.3 Styling the sections:

Styling the sections is really easy and flexible. You can customize the sections with Background Color, gradients, images of any choice. This allows you to create site with many variations.

Background Settings

Background Style

Select Background Type

Select type of Background you want to apply for this section.

Background Image URL

Image Repeat Properties

Select Image Repeat Properties

Image X-Position

Select Image Horizontal Position

Image Y-Position

Select Image Vertical Position

Background Color

Select Color

Background Gradient Type

Select Background Gradient Type

Gradient Start Color

Select Color

Gradient End Color

Select Color

These metabox settings are used to apply the background styling for the sections inside the FrontPage.

Background Options:

- Gradient
- Image
- Color

To style your section, you need to create the page first, then look for "Background Settings" and "Section Settings" metaboxes at the bottom. You can configure the colors, backgrounds, links, titles and many more. Be creative. :)

These metabox settings are used to apply the typography styling for the sections inside the FrontPage.

## 2.1.4 Menu Order

Once you have built and saved your pages and sections, create menu order from the "Order" field under the "Page Attributes" metabox at the right.

## 2.2 Theme Options

The theme comes with a simple to use administration panel. You can access it by navigating to Appearance > Theme Options. The theme options are conveniently spread over a number of tabs and each tab contains the options that pertain to a particular area of the theme.

### 2.2.1 General Options

As the label suggests, these general options allow you to configure your site's setup. Here you have options to upload your own logo and insert your Google Analytics code amongst others.

### 2.2.2 Home Settings

Here you can control any options that relate to the home section of the page.

### 2.2.3 Menu Settings

The menu options allow you to configure your site's menus. Here you can set your Navigation link color, the link hover color, your navigation type and it's styling.

### 2.2.4 Contact Section

Here you can set all the details which are to be included inside the contact section of the page.

### 2.2.5 Footer Section

Here you can set all the details which are to be included inside the footer section of the page.

### 2.2.6 Blog Settings

Here you can set all the options related to the blog, blog-single, and archive pages. Styling of the blog single and archive pages are also included in this section.

### 2.2.7 Typography

Here you can set your Typography options for the website.

### 2.2.8 Slider Options

Configure the social sharing settings from here. These social sharing options which are enabled will be displayed inside the footer.

### 2.2.9 Backup Options

This theme also allows you to backup your theme options data and you know it's always good to make a backup before you make any big changes.

## 2.3 Custom Widgets

The theme comes with custom widgets that can be used to configure how your site displays content - they can be found under Appearance > Widgets.

### 2.3.1 Custom Video Widget

This widget allows you to configure and display a single video. The widget requires the user to input video embed code taken from either Vimeo, YouTube, or other video sharing sites and can display a short description if required.

### 2.3.2 Custom Flickr Photos Widget

This widget allows you to configure and display Flickr photos from a user's photostream.

- **Title:** Title of the widget

- **Flickr ID:** The Flickr ID of the group or user's photos you wish to display. You can find out your Flickr ID at [idGettr.com](http://idGettr.com)
- **Number of Photos:** Choose the number of photos to display

### 2.3.3 Custom Latest Tweets Widget

This widget allows you to configure and display your latest Twitter tweets.

With the recent Twitter API changes, it is necessary to create a Twitter App first with your account to make the twitter widget work.

- 1) First, you need to follow the link below and sign in to your twitter account: <http://dev.twitter.com/apps>. Here, you need to create an app.
- 2) Click on the "**Create new application**" button.
- 3) Fill up the details inside the fields, Enter Captcha, Agree the terms and Click on Proceed.
- 4) Now your application will be created. For now you're provided with the "**Consumer Key**" and "**Consumer Secret key**"
- 5) Scroll down to the bottom and click on "**Create Access Token**". Revisit the page after few mins and you can see that you're now given with the "**Access Token**" and "**Access Token Secret**" keys.

**Caution:** Do not share these keys with anyone.

Now you can use the widget under Appearance -> Widgets. Grab the Rocknrolla: Twitter Widget. Fill up the below details to use this widget.

- **Title:** Title of the widget
- **Consumer Key, Consumer Secret Key, Access Token Key, Access Token Secret Key:** These keys are found in the app you've created.
- **Twitter ID:** The username of the user's tweets you wish to display e.g. envato
- **Number of tweets:** Choose the number of tweets to display.

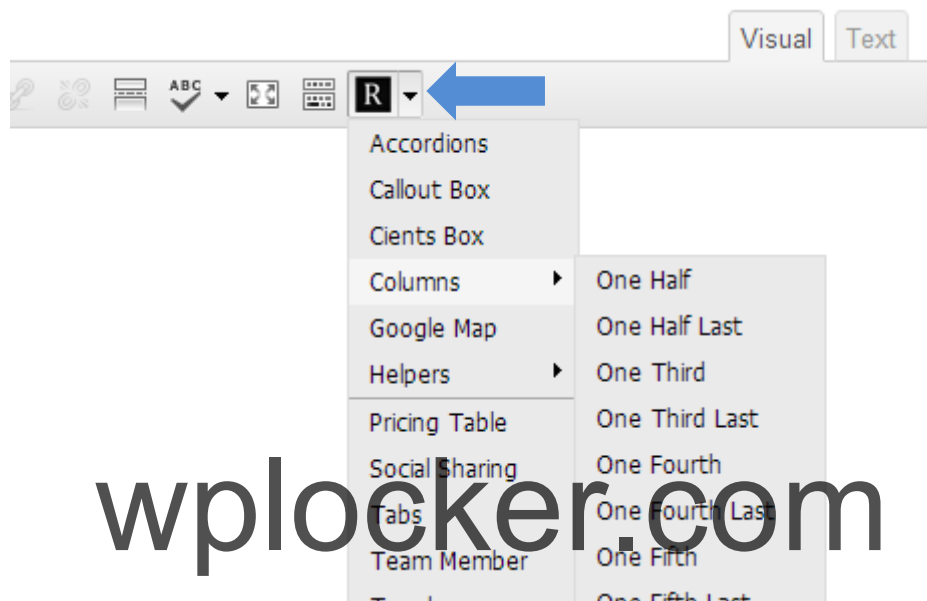

### 2.3.4 Recent Portfolio widget

This widget allows you to show your latest blog posts in widgetised areas. You can configure the title and number of portfolio items to display.

## 2.4 Shortcodes

The theme comes pre-packed with a number of shortcodes allowing you to add styled content to your site with little effort.

Conveniently, the available shortcodes have been included in a one-click menu. When creating a page or post, click the black “R” icon in the tinymce editor to reveal a list of shortcodes. Choose the functionality you wish to include and click on it.

The content for some shortcodes can be split into multiple columns. For example, the option “One Half” from the shortcode panel will insert the necessary code to split the content into two. Now you can add shortcodes like Team Member, Tabs, Testimonials, etc.

**Important:** You must end each set of columns with a “last” option such as “One Half Last”.

[one\_half] Insert you content here [/one\_half]

[one\_half\_last] Insert you content here [/one\_half\_last]

Use the wide range of the features and elements available with the theme to make your site more creative and appealing. :)

---

**Again, thank you for purchasing this theme!**

If you have any questions that are beyond the scope of this document,
